

Heavy Duty Construction Steel Scaffolding Coupler High Strength EN74-1 Silver

Our Product Introduction

for more products please visit us on bythaiscaff.com

Basic Information

- Place of Origin: china tianjin
- Brand Name: scaffolding coupler
- Certification: SGS
- Model Number: BM201
- Minimum Order Quantity: 1000
- Price: 4.5-8.5
- Packaging Details: In bundles
- Delivery Time: 15-25
- Payment Terms: TT/TC

Product Specification

- Feature: High Strength
- Name: Scaffolding Coupler
- Material: Steel
- Package: Container
- MOQ: 1000
- Standard: EN74-1
- Surface Treatment: Galvanized
- Application: Construction
- Highlight: **High Strength Scaffolding Coupler,
Heavy Duty Scaffolding Coupler,
Silver Scaffolding Coupler**

Product Description:

The Scaffolding Coupler is an essential component designed for the construction, maintenance, and repair industries, providing a robust and reliable solution for connecting scaffolding tubes. This coupler is engineered to meet the exacting standards of safety and durability required on construction sites and in various industrial applications. With a brilliant silver color, the Scaffolding Coupler not only ensures high visibility but also a professional look to the scaffolding structure.

Constructed from high-grade steel, this coupler boasts exceptional strength and resilience, making it suitable for creating stable and secure connections in steel structure scaffold systems. The material choice not only contributes to the coupler's robustness but also to its ability to withstand the rigors of heavy use in diverse working conditions. The durability of steel ensures that the Scaffolding Coupler will maintain its integrity and functionality even in the most challenging environments.

To further enhance its durability and longevity, the Scaffolding Coupler undergoes a meticulous galvanizing process. This surface treatment adds a protective layer to the steel, effectively shielding it from corrosion, rust, and wear. The galvanized finish ensures that the coupler maintains its structural integrity and aesthetic appeal over time, even when exposed to the elements. This makes it an ideal choice for outdoor construction projects where weather resistance is crucial.

Adhering to the rigorous EN74-1 standard, the Scaffolding Coupler meets all the necessary requirements for safety and performance in scaffolding applications. This certification is a testament to the product's high-quality design and manufacturing process, giving users peace of mind that they are using a product that complies with industry regulations and safety norms.

The Scaffolding Coupler is also compatible with JIS Standard Couplings, which are renowned for their precision and quality in the construction industry. This compatibility ensures that users can integrate these couplers seamlessly into systems that adhere to Japanese Industrial Standards, facilitating a broader range of construction and scaffolding projects. The coupler's versatility makes it a valuable addition to any construction site, allowing for seamless interconnectivity with various scaffolding components.

As Steel Structure Scaffold Connectors, these couplers are specifically designed to provide strong and reliable connections between scaffold tubes. Their robust construction makes them an integral part of steel scaffolding systems, ensuring overall structural stability. The precise engineering behind these connectors guarantees that they will hold scaffold tubes securely in place, preventing slippage and movement that could compromise the safety of workers on site.

High-Quality British Couplers are known for their exceptional standards and reliability, and the Scaffolding Coupler is no exception. It embodies the same high standards of quality that are synonymous with British engineering, ensuring that users can trust in its performance and safety. Whether used in the UK or internationally, the Scaffolding Coupler provides a dependable solution for scaffolding connections, adhering to the stringent quality expectations associated with British-manufactured construction products.

In summary, the Scaffolding Coupler is a vital component for any scaffolding system, offering a combination of strength, durability, and compliance with international standards. Its galvanized steel construction, adherence to EN74-1 standards, and compatibility with JIS Standard Couplings and High-Quality British Couplers make it a versatile and reliable choice for construction professionals worldwide.

The Scaffolding Coupler is poised to be an indispensable tool for creating safe and efficient scaffold structures in a vast array of building projects.

Technical Parameters:

Attribute	Details
Surface Treatment	Galvanized
Standard	EN74-1
Application	Construction
Color	Silver
Name	Scaffolding Coupler
Package	Container
Feature	High Strength
Material	Steel
MOQ	1000
